Section 1:

1. Introduction

Project Topic:

Our project name is “**AlumniIUB**”.

“**AlumniIUB**” is a social networking application whose main focus is to connect with all the Alumni of IUB, Connect with all of the IUBian fellows to teach them about career prospects, share about their accomplishments, learn about IUB initiatives, and donate to a good cause.

2. History leading to project request

In general, Universities are not practicing what they teach when it comes to their former customers- their alumni. In short, they are failing in alumni engagement. We know about the importance of alumni engagement for alumni relations offices at colleges, universities, and other institutions around the country and across the world. The idea and act of alumni engagement is important because there are alumni organizations of all kinds that want to serve their members better in this particular area. According to a recent study done by Marketing General Incorporated, 87% of alumni professionals shared they need to improve upon engaging their members. Attracting and engaging young alumni is a vital piece of this puzzle.

Independent University, Bangladesh (IUB) is the leading private university in Bangladesh with an explicit focus on research and global partnerships. With a current enrollment of around 10,000 at undergraduate and graduate levels, more than 450 highly-qualified faculty members, 47% of whom have PhD degrees, and an alumni strength of close to 14,000, But for these alumni there is no any engagement site where they can connect or find each other.

This is where " **AlumniIUB** " seeks to make a difference by linking Alumni with other Alumni, Students and University. Users can seek for help and connect with other alumni also can share their experience on that application.

3. Identify Problem, opportunity

Project Analysis:

| Problem | Solution |
|---|--|
| New graduates are struggling in their new work environment and require mentors or sound advice. They could feel disoriented if they don't have this mentorship. | The app solves this problem by allowing users to connect with other alumni, which allows them to learn about their experiences and ask questions so that other alumni who have faced the same issue in the past may help them by providing feedback. |
| There is no valid data for analytics about Alumni. Data need to be stored in a way to find easily. | With this app Users can build customized and significant alumni experiences at scale using data analytics, sophisticated segmentation, and marketing automation. |
| It is a hard task for the university to track all the alumni's Information and Invite them for events and seminar sometimes | All data of users are kept in a database. Hence, inviting them for events and seminar will be easy using this app. |

This social networking application can open wide range of opportunities in the future as we would be able to analysis the data and work on new features as well as make necessary changes if needed. Some of the opportunities are listed below:

- We can also enable new options for the people to use this app for other Universities.
- Maintaining an active alumni community has several benefits, including fundraising. by this app we can raise money for issues that are advantageous to the university.
- This may be advantageous for both universities and former students since it establishes a network of people who can get in touch with, assist, or work together on commercial endeavors.
- Having a large, active alumni network may be a great tool for building brand recognition for your university and aiding in the recruitment of the best students.
- Alumni from different University can meet, connect, interact and make networks by this friendly community created in this app.
- The government and other organizations can build or improve any country problems with the help of all the experienced and talented Alumni by analyzing data from this application.

- Companies of alumni can market their products and services by partnering with the app developers.
- Users can give feedback which can help improve the system.

4. Project goal and objectives

The main goal of this project is to develop a social networking platform only for IUB' students and alumni. The application will also aim to effectively reduce the problem of not finding their course mates and friends information. University authorities arranging any event and that time they can find all the information or give all the information on this application. An active and connected alumni network benefits both universities and former students. Understanding that the student experience doesn't end with graduation is crucial when considering the wider picture of alumni involvement.

The objective of this networking application project is to design and build a mobile application to help students and University to connect with all the alumni who graduated from IUB or going to graduate from IUB. The long-term viability of any university depends on alumni participation.

The goals and objectives of my project are listed below,

- To create a database to store information about students who already graduated from IUB.
- To store information of their other social media information of Facebook, Email and LinkedIn to connect.
- To share their achievements.
- If new graduates need any help regards finding new jobs, then they can ask for mentorship from their Alumni.
- For the information database University can invite Alumni of IUB for any events and seminars so that they can share their experience with all the new students.
- To Donate for social cause, Charity, Raising Money for any individuals or fellow IUBians with Health Conditions.

Section 2:

5. Product Description

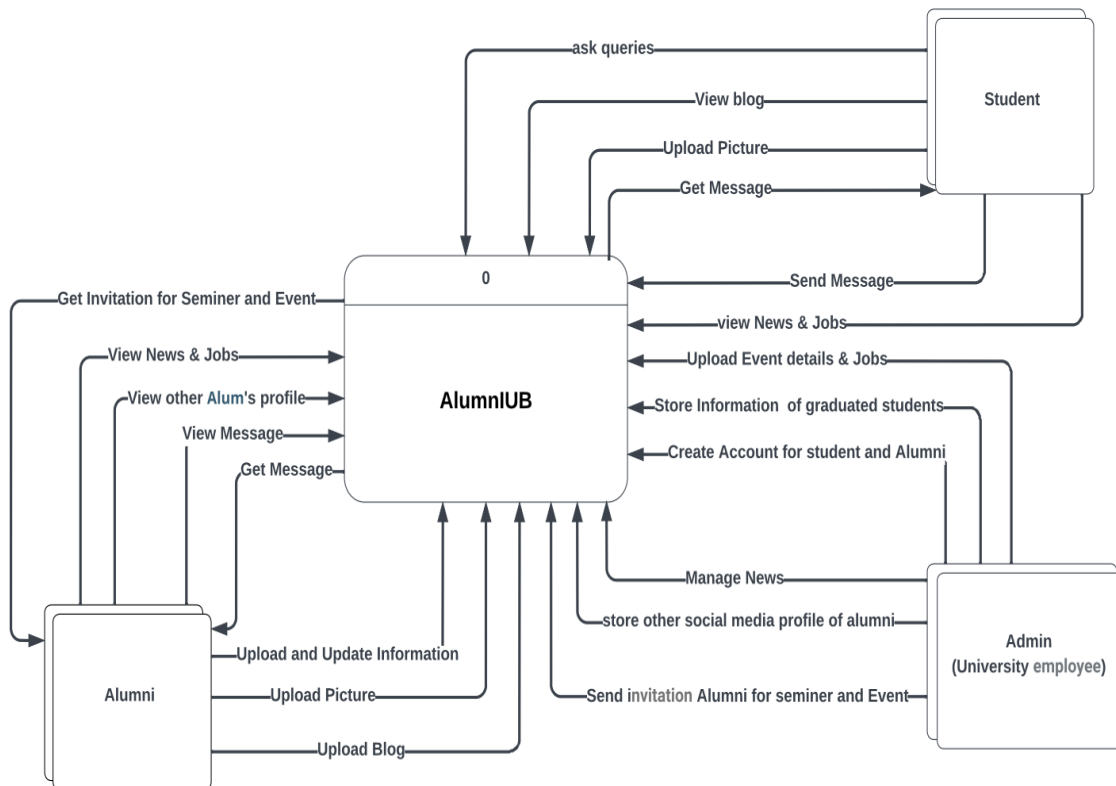

Institutions have a lot of options to invest in this app. Since a mature university will have thousands of alumni, a strong network may be one of the most effective instruments for universities to continue growing and enhancing the educational experience of current students. The connections with students, both past and present, will be improved with the help of that effective alumni engagement plan. Building a strong alumni network in IUB is made much easier and more controllable by using a platform like AlumniIUB.

System Stakeholders:

- University
- Students
- Former students (Alumni)
- Faculty Members
- System Engineers
- Mobile Application Administrators

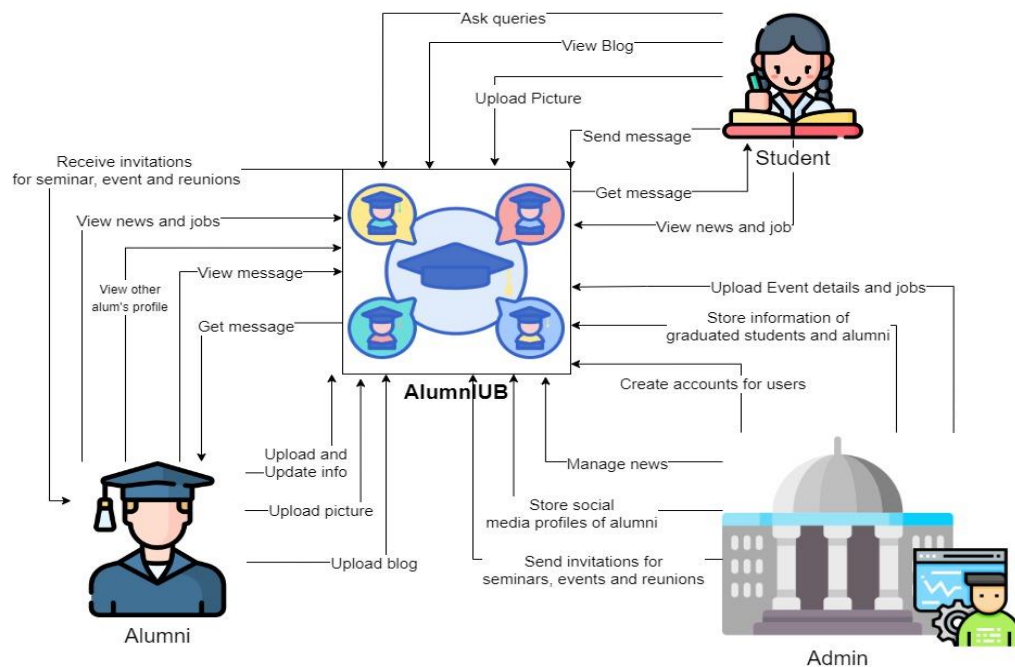

6. System Context diagram

Context Level Data Flow Diagram:

7. Hardware detail (Include Rich Picture)

Rich Picture:

Development Environment:

- The minimum hardware requirement of implement the system would be an intel dual core processor or a AMD Ryzen dual core processor with at least 2GB RAM, 120GB hard disk and other standard hardware
- The software's required in the process would be VS code, MySQL server and any desktop operating system

Operating Environment:

- The hardware of the operating device should be such that it must be capable of running a mobile application.
- Any working smart phone an android operating system (minimum version – android KitKat 4.4.4) or IOS (minimum version iOS 8) or any Linux based operating system

8. Key Technical Features of Software

- The mobile application can be accessed from anywhere, anytime with any modern smartphone android, iOS or Linux based operating system.
- The mobile application offers increased data security and ensures data integrity by RDBMS
- As per one's need various customization can be done. For example- changing theme to dark mode.

Section 3:

9. Information Gathering methods

Data collection is essential for developing software that fulfills its goals. We won't be able to meet the needs of the software's users if we don't take into account their recommendations and viewpoints. For my system, I've selected three primary information collection methods: stories, interviews, and Feasibility Analysis.

I. Stories

Story 1

One day We were talking with one of our seniors Tahmid Ahmed from IUB who graduated in 2010. He lives in the USA now. So, in that conversation he told us he is searching for one of his classmates who graduated with him but after the graduation he could not find his information. It could have been easier if IUB had a system where he might find his classmate's social media account like Facebook or LinkedIn. He also added that he doesn't get any news regarding any events that IUB arranges because of his busy working life. He misses his university life. He sometimes wants to know all the great things happening in IUB.

Findings from the story

- There is demand for a better alternative social networking application for IUB.
- Former Students want a reliable site to get information from university.

Story 2

Hello, I am Ayatullah Arefin, this story is from my side. I was working for a departmental club. So, our department told us to search Facebook and LinkedIn profile of our university alumni by checking their name from an excel sheet and put the link of their profiles in that excel sheet again which was too confusing for us that time. But if we start a system where students sign up for the account and they can also update their profiles and add links of their other main social media accounts. These accounts will be created by IUB authority and also permanent for every IUB students and alumni. Which will be Easier for everyone.

Findings from the story

- There is a need to create a database to store information about students who already graduated and existing students from IUB.

II. Interviewing

To better comprehend the situation, I decided to meet with the stakeholders. Conducting interviews is a vital step in getting the data and information needed to meet the requirements. Information on a wide range of important topics is provided via interviews. Justifications for goals, important Human Computer Interactions, feelings, and opinions are only a few examples (HCI). I explained the operation of my smartphone app "AlumnIUB" to them at the start of our conversation. Selected Interviewees are Students, University Authorities and Admin/ System Developer.

Selected Interviewee: Student

1. Are you okay with the current situation of not having any social networking application for our university?
2. Do you think the proposed system will help to serve your need properly?
3. If the proposed system were available today, would you use it?
4. Do they think the new system will be successful and accepted?
5. If you were in charge of this system, what would you change?
6. How can we improve the system?

Selected Interviewee: University

1. Do you think we need a social networking application for our university alumni?
2. Do you think the proposed system will help to serve everyone's need properly?
3. Do they think the new system will be successful and accepted?
4. If you were in charge of this system, what would you change?
5. How can we improve the system?

Selected Interviewee: Admin /System Developer:

1. What are the security issues that will cause problem?
2. How often they need to check system?
3. How long will it take to update the system?
4. Can they work in case of emergency?

III. Feasibility Analysis

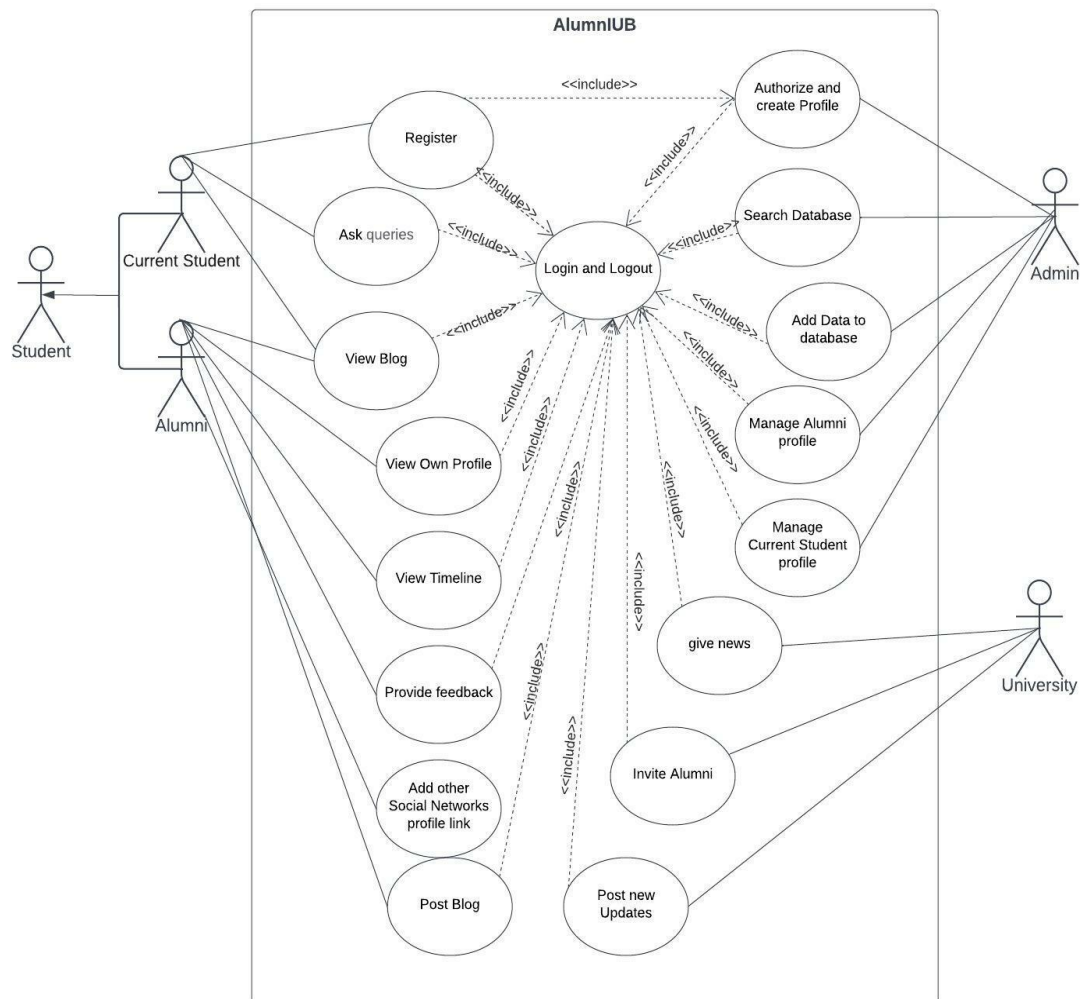

A feasibility study is a quick analysis that helps management decide whether or not to move on with developing a system study.

- It acknowledges the potential for improving an already-existing system, developing a brand-new system, and producing updated estimates for ongoing system development.
- It is used to formulate the issue and ascertain whether or not a practical or appropriate solution is available.
- Instead, then trying to find a solution, a feasibility study's main objective is to ascertain the problem's size.
- A feasibility study results in a formal system proposal that covers the whole nature.

10. Major functionalities offered by the system

- users can connect with other alumni, which allows them to learn about their experiences and ask questions so that other alumni who have faced the same issue in the past may help them by providing feedback.
- Users can build customized and significant alumni experiences at scale using data analytics, sophisticated segmentation, and marketing automation.
- All data of users are kept in a database. Hence, Admin can invite them for events and seminar easily using this app.

11. Use Case Diagram

12. Normal Scenarios

Scenario 1:

| | | |
|--|--|---|
| Use Case Name: Register For AlumnIUB | | Unique ID: KA-00001 |
| Actor(s): Student | | |
| Stakeholders: University, Student. | | |
| Description: User registers in the mobile app as Student or Alumni | | |
| Triggering Event: User registers in the app and inputs information. | | |
| Trigger type: External | | |
| Steps Performed: | | Information Required for Steps: |
| 1. The registration interface loads. | | |
| 2. Selects user type. | | user wants to register as Student or Alumni |
| 3. User enters the following information: Email, User type, username, Student ID, Major, Admission Year, NID card number, Mobile Number, address, password etc. | | Personal information of user like User type, username, NID card number, Mobile Number, Student ID, email, password. |
| 4. Clicks the submit button. | | All required information must be filled up. |
| 5. If all information is correct then user will be registered to the system. | | |
| 6. A unique id will be given to the user and a confirmation message will be shown to the user interface. | | Unique id and a confirmation message |
| Pre-condition: User needs to have idea about the features of the app. | | |
| Post-condition: User must carefully input all required information while registering. | | |
| Assumption: User wants to use the app | | |

Scenario 2:

| | | |
|---|--|---|
| Use Case Name: Post Blog | | Unique ID: KA-00002 |
| Actor(s): Alumni | | |
| Stakeholders: Alumni, Admin, Student | | |
| Description: Post Blog using the mobile application | | |
| Triggering Event: After posting blog user will be able to see comments and react of other users | | |
| Trigger type: External | | |
| Steps Performed: | | Information Required for Steps: |
| 1. User logs in to the system. | | |
| 2. Clicks in a box name create a blog. There will be a prompt written “What do you want to talk about?” | | user must be registered in the app. |
| 3. Fills up the box with user’s thoughts or speech, career advice | | Present date of the blog |
| 4. Clicks the “Post” button. | | All required information must be filled up. |
| 5. If the blog is well written then the admin of the system will make the post visible for other users | | |
| 6. User can see other’s comment and reacts of that blog | | |
| 7. User can also reply other user’s comment by clicking the button reply and then after writing the reply press send button | | |
| Pre-condition: User needs to be Registered to the app. | | |
| Post-condition: User has posted the blog | | |
| Assumption: User wants to use the app | | |

13. Alternate Scenarios

Scenario 1:

| | | |
|--|--|---|
| Use Case Name: Register For AlumnIUB | | Unique ID: KA-00001 |
| Actor(s): Student | | |
| Stakeholders: University, Student. | | |
| Description: User registers in the website as Student or Alumni | | |
| Triggering Event: User registers in the app and inputs information. | | |
| Trigger type: External | | |
| Steps Performed: | | Information Required for Steps: |
| 1. The registration interface loads. | | |
| 2. Selects user type. | | user wants to register as Student or Alumni |
| 3. User enters the following information: Email, User type, username, Student ID, Major, Admission Year, NID card number, Mobile Number, address, password etc. | | Personal information of user like User type, username, NID card number, Mobile Number, Student ID, email, password. |
| 5. If any information is not correct then an error message will be shown that information is not valid and which information is invalid is also shown. Then prompted to enter valid information. | | Error message, invalid information |
| 4. Clicks the submit button. | | All required information must be filled up. |
| 5. If all information is correct then user will be registered to the system. | | |
| 6. A unique id will be given to the user and a confirmation message will be shown to the user interface. | | Unique id and a confirmation message |
| Pre-condition: User needs to have an idea of how the mobile application works. | | |
| Post-condition: User must carefully input all required information while registering. | | |
| Assumption: User wants to use the app | | |

Scenario 2:

| Use Case Name: Ask Queries | | Unique ID: KA-00002 |
|---|--|---|
| Actor(s): Alumni, Student | | |
| Stakeholders: Alumni, Admin, Student | | |
| Description: Post Blog using the mobile application | | |
| Triggering Event: After posting Queries user will be able to see comments and react of other users | | |
| Trigger type: External | | |
| Steps Performed: | | Information Required for Steps: |
| 1. User logs in to the system. | | |
| 2. Clicks in a box name Add Question. There will be a prompt written “What do you want to talk about?” | | user must be registered in the app. |
| 3. Fills up the box with user’s thoughts or Question | | Present date of the blog |
| 4. Clicks the “Post” button. | | All required information must be filled up. |
| 5. If the Query is valid then the admin of the system will make the post visible for other users | | |
| 6. User can see other’s comment and reacts of that blog | | |
| 7. User can also reply other user’s comment by clicking the button reply and then after writing the reply press send button | | |
| Pre-condition: User needs to be Registered to the app. | | |
| Post-condition: User has posted the blog | | |
| Assumption: User wants to use the app | | |

14. Functional Requirements

It's critical to under what the functional requirements of a system are for both the development team and the stakeholders. The functional requirements of the system are as follows:

1. Users will be able to use the app on a variety of mobile devices include Windows, Android, IOS and Linux.
2. Users will have the option of registering as a Student or a Alumni.
3. The user interfaces for Student and Alumni will be distinct.
4. The user will be able to specify their preferences to achieve a better result.
5. The user will be able to both input and select the data that is required.
6. The app database will hold all the data.
7. All saved data will be safe and secure and will not be tampered with.

8. For each registered user, a user profile will be created.
9. User will be allowed to edit profile anytime.
10. The information that the user has altered will be automatically updated and saved.
14. All user data will be encrypted for data security.
15. During registration, users' identities will be verified by email, phone number and NID verification.
16. The user will receive a verification code by email or phone call.
17. The user will be able to reset their password by submitting a request.
19. Users will have the ability to rate and comment on the application.
20. Any user criticism will be forwarded to the admin authority

15. Non-Functional Requirements

The non-functional requirements of the system are as follows:

Reliability:

- The system must be always available and should not experience any downtime.
- All tasks must be completed without any software-related errors or with minimal errors.

Performance:

- It should return a search result in 2/3 seconds.
- The user interface must be visible in less than five seconds.

Maintainability:

- All this system's data must be maintained safe no matter what happens to it; hence the system will require data backup planning.
- If an error happens during any of the system's processes, the system will be able to trace each fault and correct it as quickly as possible before continuing the operation.

Efficiency:

- The system must be able to accommodate at least 1,000 individuals at the same time while also consuming minimal resources such as memory, CPU, and disk space.

Security:

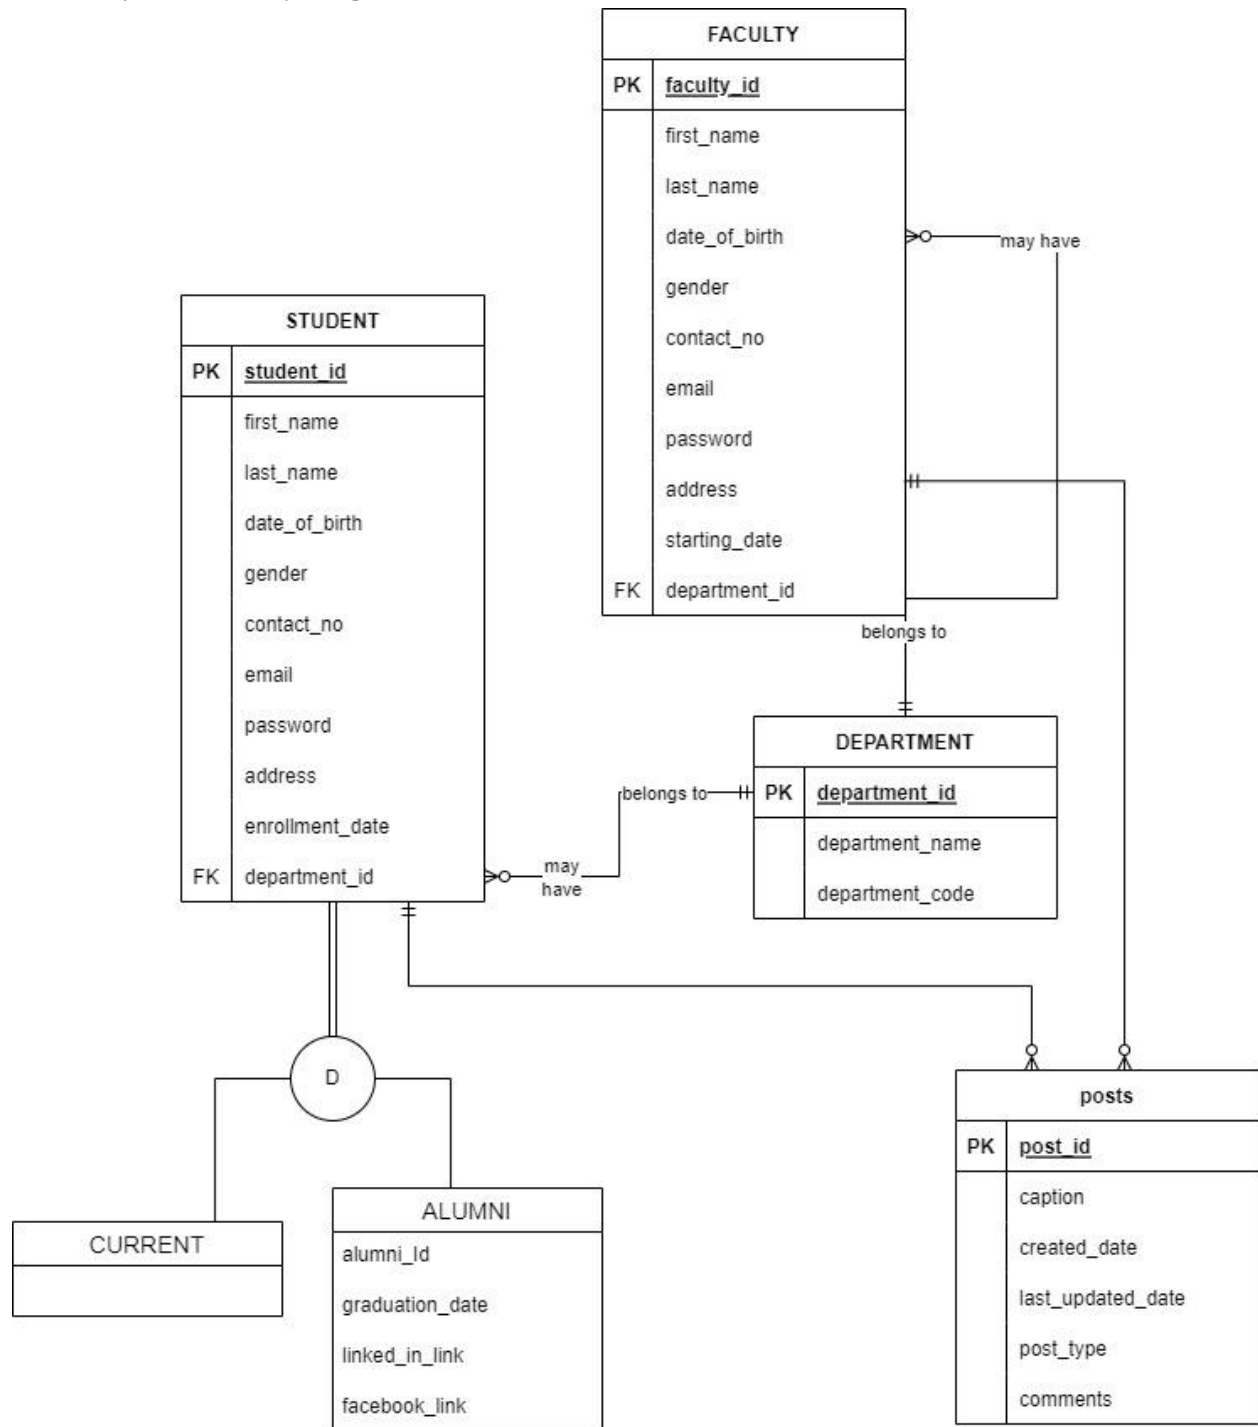

- To utilize this system, users must first register, after which only registered users can access the system's features by logging in with their ID and password.
- Ascertain that the system, or any of its data, is never subjected to malware attacks or illegal access.
- Unless it is required, a user's personal information or other data should not be available to other users.

Scalability:

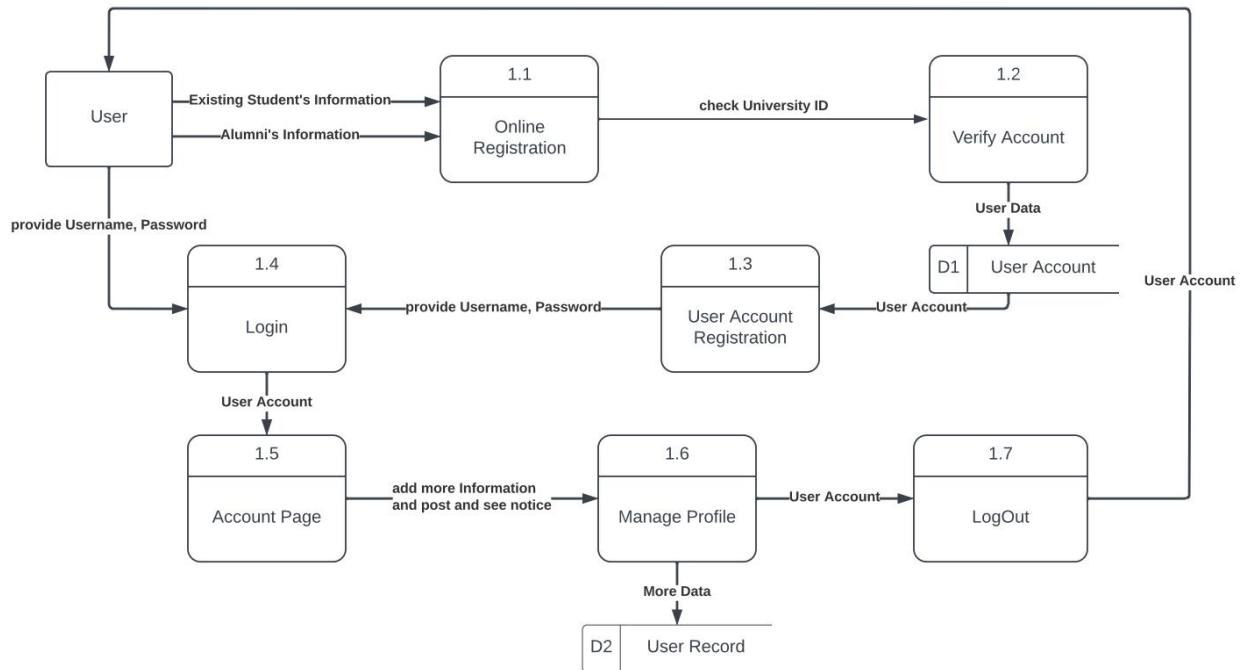

- This system must be scalable because it will be used by anyone admitted to IUB. Number of students in IUB increases every semester. That is, regardless of how much memory, servers, or disk space is required, the system should be able to accommodate an increase in the number of users and processes without affecting performance.

Section 5:

25. Structure English pseudo code for the system

```
IF "Sign Up" clicked THEN
    GET registration form
    DISPLAY form
    FILLUP credentials
    CLICK "Create Account"
ELSE "Login" clicked THEN
    GET login interface
    DISPLAY interface
    FILLUP credentials
    CLICK "Login now"
DO WHILE user logged in
    IF "Job" clicked THEN
        GET job interface
        DISPLAY interface
        IF "Find" clicked THEN
            GET find interface
            DISPLAY interface
        ELSE "Hire" clicked THEN
            GET hire interface
            DISPLAY interface
    ELSE IF "Forum" clicked THEN
        GET forum interface
        DISPLAY interface
        IF text-field filled THEN
            CLICK "Share"
    ELSE IF "Event" clicked THEN
        GET event interface
        DISPLAY interface
    ELSE IF "Find people" clicked THEN
        GET find people interface
        DISPLAY interface
        IF searchbar filled THEN
            CLICK "Search"
    ELSE IF "My Profile" clicked THEN
        GET my profile interface
        DISPLAY form
        IF credential filled up THEN
            CLICK "Save Profile"
    ELSE "Logout" clicked THEN
        application CLOSED
```

26. Prototype the user interface

First Interface

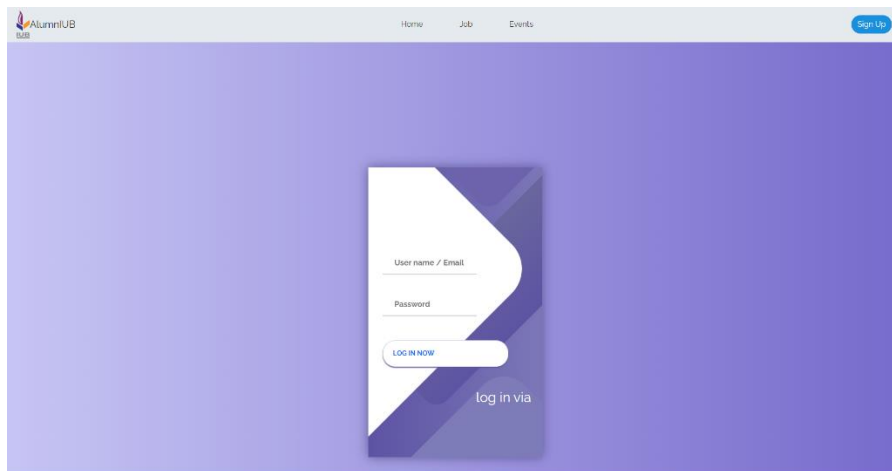

Sign Up Interface

The screenshot shows the "Register" form on the Alumni IUB website. The form is titled "Register" and contains the following fields and sections:

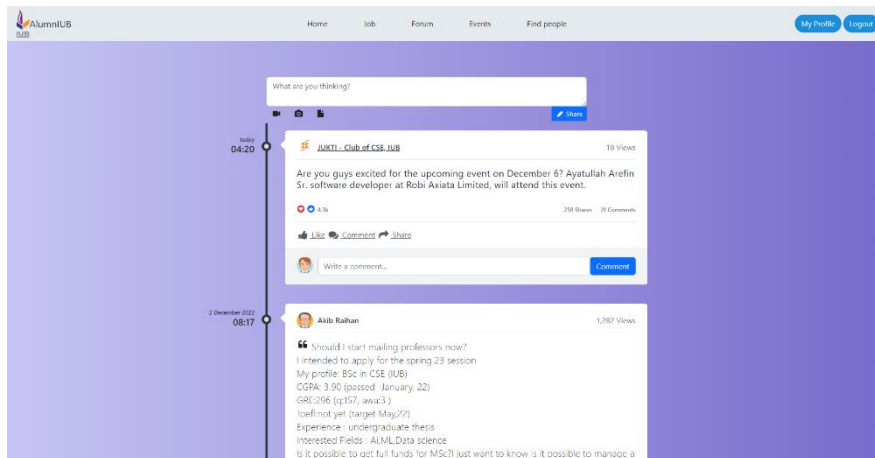

- User Name**: Input field with placeholder "User Name".
- IUB ID**: Input field with placeholder "IUB id".
- Password**: Input field with placeholder "Password".
- Confirm Password**: Input field with placeholder "Confirm Password".
- PERSONAL INFORMATION**: Section header.
- Phone No.**: Input field with placeholder "Phone Number".
- City**: Input field with placeholder "Dhaka".
- Agree to the terms**: Checkbox.
- Already have an account? Click here to Login**: Link.
- REGISTER**: Button.

Login Interface

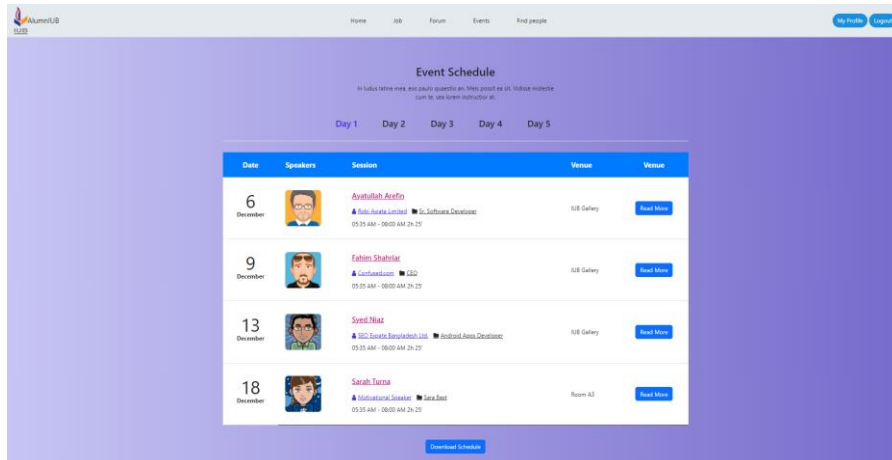

The login interface features a purple gradient background. At the top, there is a navigation bar with the AlumniUB logo, links for Home, Job, and Events, and a Sign Up button. The main content area contains a white login card with a large blue arrow graphic. The card has input fields for 'User name / Email' and 'Password', a 'LOG IN NOW' button, and a 'log in via' link.

Forum Interface

The forum interface shows a purple background with a navigation bar at the top. The main content area displays a timeline of forum posts. The first post is from 'AJKT1 - Club of CSE-IUB' and discusses an upcoming event on December 6th. The second post is from 'Akiba Raftan' and discusses starting mailing professors now. The interface includes a search bar, a 'What are you thinking?' prompt, and a 'Share' button.

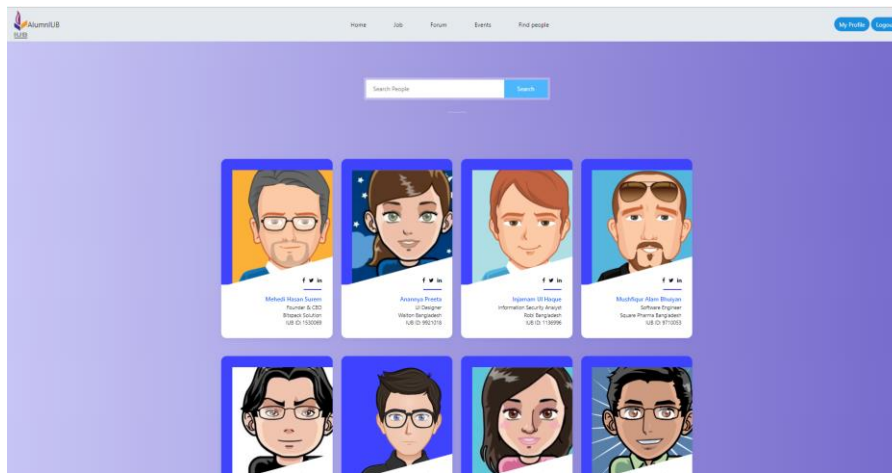

Event Interface

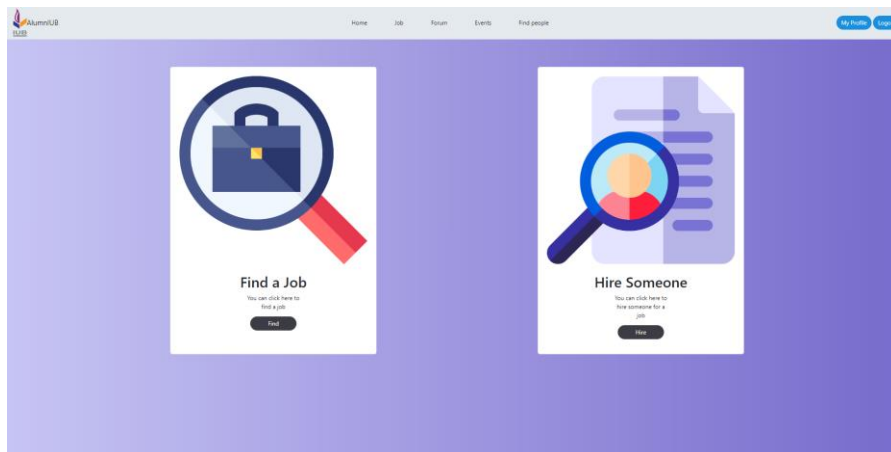

The event interface displays a purple background with a navigation bar at the top. The main content area features an 'Event Schedule' section with a table listing events for Days 1 through 5. The table includes columns for Date, Speakers, Session, Venue, and Venue. The events listed are for December 6, 9, 13, and 18, featuring speakers like Ayatullah Arefin, Fahim Shahriar, Syed Niaz, and Sarah Turan. A 'Download Schedule' button is located at the bottom.

| Date | Speakers | Session | Venue | Venue |
|-------------|------------------|---|-------------|-----------|
| 6 December | Ayatullah Arefin | Robi Axiata Limited / IC-Software Development | IUB Gallery | Read More |
| 9 December | Fahim Shahriar | CardboardLand / CEO | IUB Gallery | Read More |
| 13 December | Syed Niaz | IC-Software Development / IC-Software Development | IUB Gallery | Read More |
| 18 December | Sarah Turan | Robi Axiata Limited / IC-Software Development | Room A2 | Read More |
